Werth, S.
METHODS FOR MEASURING AND PRODUCTION OF BORES OF WIRE, WITH PREDETERMINED ROUNDING-OFF RADII AND BEARING LENGTHS. [1962] 9p. (figs. tables formulae omitted).
Order from SLA $1.10 63-10005

Trans. of Stahl und Eisen (West Germany) 1952, v. 72, no. 2, p. 66-69.

DESCRIPTORS: Measurement, Production, *Boreholes, *Wire, Dies, Drawing (Machine processing).

Differences in dimensions in the use of conical test needles for the determination of the cylindrical bearing length z in drawing tools obtained from measuring values of both the angular drawing bore and the final form with rounded off edges make it possible, on the basis of geometrical derivations to determine the (Machinery--Manufacturing, TT, v. 9, no. 11) (over)

63-10005

1. Title: Boring
I. Werth, S.

rounding-off radii and thus the actual length z. Thus the pre-determined bearing length and the rounding-off radii desired may be checked and maintained, on a shop basis, in an inexpensive manner, using intermediate measurements during the production of the drawing bore. Checking of radii when the drawing tools are finished is not possible without knowledge of pre-determined dimensions. A standard form containing records with respect to the drawing bore measured may simultaneously serve for notes in plant experiments which facilitate the determination of optimum drawing bores which will suit the individual requirements of each plant and furnish data for its most economical production.
